015

Last year, **Agriscop Africa Ltd (East African Seed Co.)**, celebrated 50 years since incorporation marking a major milestone in the company's history. Since inception, a lot has been achieved in the agricultural space (particularly in the seed sector) where we have been ranked among the top companies in Eastern and Southern Africa in Access to Seeds Index. This could not have happened without you; our key customers and stakeholders.

Climate change is posing a significant threat to agriculture in the region, putting food security at risk. We are aware of other challenges facing our industry, including soil degradation, pest and disease pressures, effects of COVID 19, the Russia-Ukraine war, rising cost of doing business.

In the face of emerging and persisting challenges, **Agriscop Africa Ltd (East African Seed Co.)** has consistently maintained its obligation to quality and service delivery to the population through continual investment in research & development, technological innovation, product development, provision of integrated crop protection & nutrition solutions, introduction of climate smart crop varieties to guarantee production aimed at enhancing food security for the ever growing population.

In crop protection, we are continuously working to ensure farmer's needs to deal with pest and disease challenges are met through well researched products that are user and environmental friendly, eight more additions are set to be released this year.

Our research and development team is continuously working to develop new seed varieties that are adapted to these challenges.

Maize – Climate resilient variety **MH402 (PEMA)** is now under commercial production. This will enable farmers in drylands and lowlands improve farm level productivity in view of persistent droughts.

TAJI (MH502) – a new MLND tolerant hybrid – will be a welcome relief to farmers in MLN disease prone areas.

Besides strong presence in Kenya, Uganda, Rwanda, Tanzania and Zambia, we are now expanding our regional presence to cover Burundi and DRC with hybrid maize – the varieties will be produced and distributed locally in Burundi and DRC.

New pipeline hybrids under national tests e.g., **EASH 1697** are showing immense potential for both food and feed purposes

We are at an advanced stage to introduce new yellow grain maize hybrid portfolio for dairy farmers in the region – 3 hybrids are now under trials in Kenya.

TOMATO

In-house breeding program has developed exciting Tomato hybrids with preferred features such as BW & TYLCV tolerance and good fruit qualities. We are now upscaling the seed of these pipeline hybrids.

SUNFLOWER

New sunflower variety **ANCILA** - rich in oil and oleic acid has been recommended for release in Kenya.

BEANS

In collaboration with KALRO, we are producing and distributing High Iron Beans which boost immunity and nutritional wellbeing in the community especially for women and children.

SEED PRODUCTION

A Pilot phase of Tomato hybrid seed production was successful. We are developing a state-of-the-art Tomato Hybrid seed production facility at Thika Farm. The third entity involved in Tomato seed production in the continent.

We will continue to provide you with the best quality seeds, technical support and training to help you achieve desired goals. The company is committed to empowering and training the youth to ensure that the next generation of farmers is ready to feed the world.

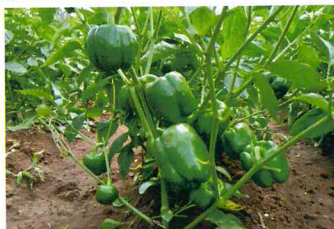

In conclusion, I would like to thank you for your continued partnership with **Agriscop Africa Ltd (East African Seed Co.)**. We value your business and your trust in our products and services. Together, we can create a brighter future for all of us and transform Agriculture.

I wish you a prosperous and successful 2023.

Jitu Shah

Managing Director

Sweet Pepper - Gallant F1

- Large robust plants, high yielding variety
- Attractive compact thick fruits, short blocky fruits with 4 lobes
- Good continuous fruit set
- Dark green medium sized fruits
- Excellent uniformity and size
- Good disease package

Collards - Sweet Georgia F1

- Long harvesting period
- Early maturing 40-45 days
- Large, medium dark green and wide leaves
- Great uniformity and fast regrowth
- Widely adapted and slow to bolt
- Very palatable, easy to cook and sweet taste
- Highly resistant to black rot

Onion - Red Striker F1

- A short day hybrid red onion
- Early maturity 90 days
- Produces medium - large bulbs with improved quality
- Excellent skin and good colour
- Hard and firm bulbs
- Cures down quickly with excellent shelflife
- Good tolerance to Pink root

Butternut - Venus F1

- Excellent fruit set
- Maturity 90 days
- High yielding with large uniform fruits, suitable for both fresh and processing markets
- Fruits are cylindrical with bulbous blossom end
- Uniform medium sized and weight 1.8 - 2.5 kg
- Yield potential: 15 -18 tons per acre

Tomato – 4420 F1

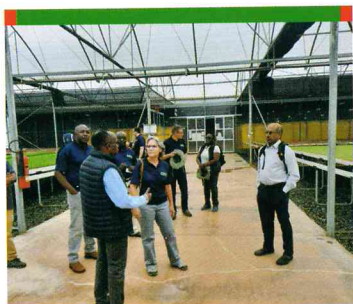

- Vigorous high yielding semi determinate variety with excellent fruit set
- Fruits are oval in shape
- Excellent close bearings with uniform fruits; suitable for prolonged harvests
- Uniform medium sized fruits 120 -140 gm
- Good fruit firmness and long shelf life
- High yield potential 35 - 40 tons per acre
- High disease tolerance to BW, F, V, TYLCV

AGROCHEMICAL PRODUCTS LAUNCHING IN APRIL 2023

PRODUCT	NARRATIVE
SYOSATE 480 SL (Glyphosate 480g/L)	A post emergence, non-selective herbicide for the control of annual and perennial weeds.
HAMMER 250 SC (Azoxystrobin 250g/L)	Fungicide for control of rust and Botrytis on Carnations; Rust, Anthracnose and Angular leaf spot on french beans.
ASCONAZOLE 25% EC (Difenoconazole 250g/L)	Fungicide for the control of Powdery mildew and Botrytis.
SYOMINE 720 SC (Dichlorophenoxy acetic acid 720g/L)	Post-emergence herbicide for control of broad-leaved weeds
SYOCARB 15% SC (Indoxacarb 150g/L)	Insecticide for control of Diamond back moth and cabbage loopers in cabbages and caterpillars in roses.
AGRIWIN 72 WP (Mancozeb 640g/Kg + Metalaxyl 80g/Kg)	Fungicide for the control of early blight and late blight in tomatoes and downy mildew in roses.
SYOPRID 20 WSP (Acetamiprid 200g/Kg)	Insecticide for the control of thrips, aphids and whiteflies.
SYONIL 72% WP (Mancozeb 640g/Kg + Cymoxanil 80g/Kg)	Fungicide for control of early blight and late blight in tomatoes, downy mildew and botrytis in roses.
